ESTABLISHMENT OF THE YOUTH PARLIAMENT IN UZBEKISTAN AND ITS IMPORTANCE

Lecturers Nafisa Khayotova
Bukhara State University in Uzbekistan, khayotova.nafisa@bk.ru

ABSTRACT

This article discusses the structure of the Youth Parliament in the Republic of Uzbekistan and its importance. It was noted that the current youth policy plays a special role in the work of the state as the main reformer, because the development of each country today and tomorrow depends in many ways on the physical and spiritual maturity of the younger generation. Today, the issue of youth is one of the most important issues. From the first years of our independence, the focus on youth has risen to the level of public policy. At present, the total population of Uzbekistan exceeds 34 million, of which about 60%, or 18.5 million, are young people. That is why youth policy is reflected in all state strategies aimed at ensuring the sustainability of the country's development. The new approach to youth personnel policy in the new conditions means that the country has created a new system of governance, typical of the national state system from top to bottom. The formation of a harmoniously developed generation in our country since the early days of independence has become the basis of state policy, and in 1991 the law "On the Foundations of State Youth Policy" was adopted. Today, the formation of a new worldview and thinking in the minds of young people, the education and support of socially active youth has become one of the priorities of state policy. Law of the Republic of Uzbekistan "On state policy on Youth", signed by President Shavkat Mirziyoyev on September 14, 2016, "On the strategy of actions for further development of the Republic of Uzbekistan" on February 7, 2017, "On the state program" Youth-our future" on June 27, 2018, decrees and other normative-legal acts of June 30, 2020 "On measures to radically reform and take the state policy of youth in the Republic of Uzbekistan to a new level" demonstrate the importance of youth policy. It should be noted that 2020 was a turning point in the development of state youth policy. This year, many important structures have been established to solve the problems of young people and provide them with close support. This can be seen in the fact that in the Senate and the Legislative Chamber of the Oliy Majlis of the Republic of Uzbekistan "Youth Parliament" began to function.

ABSTRACT

In medical technology, there are various exposure methods in medical equipment such as temperature sensor, temperature sensor devise which have been widely used by many medical place such as hospital to adapt to technological changes in line with the speed of wireless medical equipment. This component is also very much in line with the medical world of the modern devices and technology. Therefore, in this study, we has developed a device that include temperature sensors for medical laboratory use implemented by doctors or nurse or engineer where it is the concept of measuring temperature for equipment characterization. Coming along with the urgent development of temperature sensor, it have invaded the medical area with a wide range of capability. Not only improving the quality of life of patients and doctor-patient efficiency, temperature sensor enables clinicians to monitor patients remotely and give them timely health information, reminders, and support , potentially extending the reach of health care by making it available anywhere, anytime. In this project research, we discuss the advantages of temperature sensor that used in the project where medical laboratory and challenges involved in this technology. We focus on measuring distance between the patients and doctors or public people who came to hospital or clinics. We have also investigated standards being used in wireless medical applications and location of temperature sensor in a healthcare system. Finally, we identify innovative medical applications of wireless networks developed or being developed in research, projects and research groups on wireless medical application, and commercial products and measuring.

Keywords: Temperature Sensor, Medical Laboratory Lab, Sensor
