## **Theoretical basis of organization of independent educational process in the credit-module system**

Today, the trend of development and improvement in all areas is taking place at a very high pace. This is reflected in the rapid reforms in the field of education in our country. In particular, in order to raise higher education to a new level in terms of quality, the concept of development of the higher education system of the Republic of Uzbekistan until 2030 and a number of other regulatory documents were adopted. Also, by 2030, 85 percent of all higher education institutions (HEIs) in the republic, including 33 higher education institutions in the 2020/2021 academic year, were shown to be transferred to the credit-module system. According to the concept, the procedure of gradually transferring the educational process to the credit-module system was introduced in higher education institutions.

The credit-module system is a process of educational organization and is an assessment model based on a set of module technologies and a credit measure. Carrying it out as a whole is a complex and systematic process. In the principle of credit module, two main issues are given importance: ensuring independent work of students; assessment of student knowledge based on rating.

The following are recognized as the main tasks of the credit module system:

- organization of educational processes on the basis of modules;
- determining the value of one subject, course (credit);
- assessment of students' knowledge based on the rating score;
- to enable students to create their own study plans individually;
- increasing the share of independent education in the educational process;
- the convenience of educational programs and the ability to change based on the demand for a specialist in the labor market.

In the creation of a syllabus in the credit-module system, a higher share of independent education than classroom hours was determined in the educational loads.

First of all, it is necessary to clearly define what is the independent work of students. In general, this is any activity related to training the mindset of a future specialist. Any type of training that creates conditions for independent thinking and cognitive activity of the student is related to independent work. In a broad sense, independent work should be understood as the sum of all independent activities of students both in the classroom and outside, in contact with the teacher and in his absence.

The core object of independent education is the training of highly qualified, competitive, modern personnel capable of meeting the high requirements of democratic and legal reforms being carried out in the country, modern international standards, as well as self-study of students, quality management of this activity, development of system analysis and management skills in relevant areas, education professionalism (competence) in them, prevention of gaps in the development of modules by students, their identification and elimination.

The main goals of independent education of students are:

- acquiring new knowledge acquisition methods, being able to independently analyze processes;

- strengthening, deepening, expanding and organizing the knowledge acquired in classroom training;
- learning to work with regulatory and legal acts, information and special literature;
- independent study of educational materials;
- development of activity, knowledge acquisition, creative initiative, responsibility and order;
- formation of the ability to apply the acquired knowledge in practice;
- independent thinking, self-development, formation of the implementation of one's own plan;
- to develop the ability to research.

The main task of higher education is the formation of a creative personality of a specialist capable of self-development, self-education and innovation. It is difficult to solve this problem only by passing it from the teacher to the student in a ready-made form. It is necessary to transfer the student from a passive consumer of knowledge to an active creator of knowledge who can formulate a problem, analyze ways to solve it, find the optimal result and prove its correctness.

It implies directing to active methods of knowledge acquisition, development of students' creative abilities, transition from innovative education to individualized education, taking into account the needs and capabilities of the individual. It's not just about increasing the number of hours for freelance work. Strengthening the role of independent work of students means a fundamental revision of the organization of the educational process at the university, it should be built in a way that develops the ability to acquire knowledge, forms the student's ability to self-develop, creative application. Acquired knowledge, methods of adaptation to professional activity in the modern world.

It should also be noted that automated teaching and learning management systems are increasingly entering the educational process, which allows a student to independently study a particular subject and at the same time improve the level of mastery of the material.

In conclusion, we note that the specific methods and forms of organizing students' independent work, taking into account the course, the level of preparation of students and other factors, are determined in the course of the teacher's creative activity, so these recommendations are claimed to be universal.
