Abstract: This article talks about the issue of training mature personnel, which is gaining relevance in today's education system. The fact that theoretical and applied sciences should be conducted simultaneously in higher education is analyzed using the example of journalism. Opinions about the new system are recorded. Some shortcomings are shown.

Key words: low, education, technology, system, university, subject, journalism.

Introduction: Studying in kindergarten, school (college and technical school if desired), and higher education is the educational system established in our country. Until 2017, the 12-year general compulsory free education system under the 9+3 scheme operated on the basis of the Law on Education and national personnel training programs adopted on August 29, 1997. On June 16, 2017, during his visit to the 78th school in the Uchtepa district of our capital, the head of our country put forward the idea of restoring an 11-year education. Emphasizing the effect of this kind of education: "In the upper classes, children become individuals and form a team. At the same time, they should not be separated from the environment in which they learned". [1] A public survey was conducted, and 70% of the public supported this initiative. As a result, the Resolution of the Cabinet of Ministers of the Republic of Uzbekistan dated March 15, 2017, No. 140 was adopted. [2]

Literature review: In accordance with this decision, 11-year education is taught in our schools. The main goal of switching to such a system of education was to improve the quality of education and increase the ratings of those entering higher education institutions. In fact, the number of young people who have reached the level of studentship has increased sharply in the past 5–6 years. But it cannot be said that there are no shortcomings in higher education. Or will the status of a student become a burden to the young generation after entering higher education? Although 150–100 candidates are admitted to one field, only 30–40% of them can reach the status of senior staff. There is no specialty that can be learned through theoretical knowledge without practical knowledge or only through practical knowledge without theoretical knowledge.

Research methodology and empirical analysis: For a student exposed to our universities and institutes, there are enough potential professors (exception: only in fields that have been established for a long time). This is one of the problems that the country is facing. If the lines that used to be in 2-3 regions of our country start to work in other areas that have been updated, 2-3 generations will become semi-literate before the experts and the system come to a boil.

Fortunately, online, even remotely, we have the opportunity to contact the masters of their profession. However, there are few independent applicants. One more aspect is worth noting. Let's take the example of journalism and analyze it: according to the opinion of the audience, it seems that our means and methods of information sharing are frozen in one place. Boring, moldy press; sound and image duplicating film television; some fake online networks, etc. Comparing foreign journalism and the system of education in this field with ours, it is possible to show the difference between earth and heaven. First of all, it is better to accept those who sincerely say they will become journalists. In the second place, the educational process should be divided into two parts. Combining theoretical knowledge and practice Teachers entering the class can't produce a mature staff only with a pencil or paper. Is photojournalism being studied? Of course, one lesson is theoretical and the other is traveling together with the team, and it is excellent to have a lesson using modern technology. In public speaking classes, it is appropriate to do practical exercises on how to achieve this without being told about correcting the duplicitous voice. Attracts attention at first sight, and to be the author of special material today, the level of a semi-programmer is required. However, computer literacy takes only one semester. Since 2000, the development of the Internet system in our country has promoted online journalism over other types. [3] Currently, multimedia materials have the most customers. Imagine going to a big conference. Do you think that it will be effective to give a dry interview to two or three people and a couple of short videos? Or is it better to think creatively and share information in a unique way? Currently, multimedia materials have the most customers. Imagine going to a big conference. Do you think that it will be effective to give a dry interview to two or three people and a couple of short videos? Or is it better to think creatively and share information in a unique way? Currently, multimedia materials have the most customers. Imagine going to a big conference. Do you think that it will be effective to give a dry interview of two or three people and a couple of short videos? Or is it better to think creatively and share information in a unique way? Another thing as necessary as water and air is the environment! The environment is such an important thing that even if the theoretical knowledge is excellent, the work coefficient is close to zero if it is not tested in practice. For example, the military journalist was not at all in the military pavilion or in emergency situations. If you encounter such situations in your work, it is natural for you to be shocked.

Conclusion and debate: In conclusion, we can boldly say that it is very important, not only for journalism but for every profession, to grasp with hands, to see with eyes, to try again and again, and to acquire practical knowledge. This statement may spark debate among some who argue that theoretical knowledge is equally important, but ultimately, hands-on experience can provide a deeper understanding and skillset in any field. The combination of practice and theory is the hallmark of a qualified specialist. Only a person who possesses both can fly high in the sky of his choice. This is what today demands of us!
