O'zbekiston Respublikasi Oliy ta'lim, fan va innovatsiyalar vazirligi Buxoro davlat universiteti tomonidan "Yangi O'zbekiston tilshunosligida lingvokulturologiya, pragmalingvistika, neyropsixolingvistika va lingvofolkloristika sohalarining dolzarb muammolari" mavzusidagi xalqaro ilmiy-nazariy anjuman 2024-yil 16-17-aprel kunlari o'tkazildi. Mazkur Xalqaro anjumanimizda Oliy o'quv yurtlari hamda ilmiy-tekshirish instituti olimlari, yetuk mutaxassislar, stajyor-tadqiqotchi-izlanuvchilar, talabalar, xorijiy mamlakat olimlari ishtirok etishdi.

Anjuman maqsadi tilshunoslik, lingvomadaniyatshunoslik, pragmalingvistika, neyropsixolingvistika va lingvofolkloristika sohalaridagi taniqli tadqiqotchilar va mutaxassislarni birlashtirgan yuqori darajadagi akademik almashinuvlar ta'minlashdan iborat.

Anjumanda muhokama qilingan yo'nalishlar va sohalar:

❖ TILSHUNOSLIK

- ❖ Nazariy tilshunoslik
- ❖ Amaliy tilshunoslik
- ❖ Qiyosiy tilshunoslik
- ❖ Chog'ishtirma tilshunoslik
- ❖ Umumiy tilshunoslik
- ❖ Matn tilshunosligi
- ❖ Zamonaviy tilshunoslik
- ❖ Tarixiy tilshunoslik

❖ ADABIYOTSHUNOSLIK

- ❖ Lingvofolkloristika
- ❖ Lingvopoetika

❖ TIL VA PEDAGOGIK TA'LIM

- ❖ Pedagogika
- ❖ Didaktika

- ❖ Lingvomadaniyatshunoslik
- ❖ Psixolingvistika
- ❖ Neyrolingvistika
- ❖ Neyropsixolingvistika
- ❖ Pragmalingvistika
- ❖ Etnolingvistika
- ❖ Sotsiolingvistika
- ❖ Kognitiv lingvistika

- ❖ Lingvostilistika
- ❖ Narratologiya

- ❖ Metodologiya
- ❖ Metodika

Ilmiy-nazariy anjuman quyidagi sho'balarda ish olib bordi:

1-SHO'BA. ZAMONAVIY TILSHUNOSLIK VA LINGVOMADANIYATSHUNOSLIK MASALALARI:

O'zbek va xorijiy tillar muhitida vujudga kelgan zamonaviy til yo'nalishlari, sintaktik va semantik rivojlanishlarni chuqur tahlil qilish hamda til va madaniyatni o'zida mujassamlashtiruvchi ilg'or tilshunoslikning dolzab muammolari tadqiqi yoritiladi.

2-SHO'BA. NEYROPSIXOLINGVISTIKA VA PRAGMALINGVISTIKA DOIRASIDAGI ILMYI IZLANISHLAR:

Tilshunoslikning turli ijtimoiy-madaniy sharoitlarida tilning pragmatik qo'llanilishiga oid tadqiqotlar hamda Yangi O'zbekistonga xos bo'lgan lingvistik jihatlar va neyropsixologik faoliyati o'rtaсидagi aloqalarni o'rganishga urg'u beriladi.

3-SHO'BA. ZAMONAVIY ADABIYOTSHUNOSLIK VA LINGVOFOLKLORISTIKA TADQIQOTLARI:

O'zbek xalq og'zaki ijodi va jahon folklorida ildiz otgan til an'analarini tekshirish, ayniqsa, og'zaki rivoyatlarga va lingvistik avloddan avlodga o'tishga jihatlariga e'tibor qaratiladi.

4-SHO'BA. TIL VA TA'LIM:

Tilshunoslik, filologiya va barcha ta'lim sohalari oldida turgan farqli va mushtarak ilmlarni tadqiq etishga asosiy urg'u beriladi.

Abstract: This study investigates the pragmatic aspects of medical terminology in the French and Uzbek languages. Pragmatics plays a crucial role in understanding how language is used in context, particularly in specialized domains such as medicine. By analyzing medical terms in French and Uzbek languages, this research aims to shed light on how pragmatic factors influence the interpretation and usage of terminology in healthcare communication. The study employs qualitative analysis methods to examine various pragmatic aspects, including context-dependency, implicature, and speech acts, within medical terms in both languages. The findings provide valuable insights into the pragmatic characteristics of medical terminology in French and Uzbek languages, contributing to a deeper understanding of cross-linguistic communication in healthcare settings.

Keywords: pragmatics, medical terminology, French language, Uzbek language, cross-linguistic communication, healthcare.

Аннотация: В данном исследовании рассматриваются прагматические аспекты медицинской терминологии во французском и узбекском языках. Прагматика играет ключевую роль в понимании того, как язык используется в контексте, особенно в специализированных областях, таких как медицина. Путем анализа медицинских терминов на французском и узбекском языках данное исследование направлено на то, чтобы прояснить, как прагматические факторы влияют на интерпретацию и использование терминологии в медицинском общении. В работе используются методы качественного анализа для изучения различных прагматических аспектов, включая зависимость от контекста, импликатуру и речевые акты, в медицинских терминах на обоих языках. Полученные результаты предоставляют ценные исследовательские данные о прагматических характеристиках медицинской терминологии на французском и узбекском языках, что способствует более глубокому пониманию межъязыкового общения в медицинских средах.

Ключевые слова: прагматика, медицинская терминология, французский язык, узбекский язык, межъязыковое общение, медицинское общение.

Introduction.

In the realm of healthcare communication, the precise and effective use of medical terminology is paramount. However, the interpretation and application of medical language extend beyond its lexical definitions; they are intricately influenced by pragmatic considerations. Pragmatics, the study of language in context, plays a crucial role in understanding how communication unfolds within specialized domains such as medicine. In this context, our study focuses on exploring the pragmatic dimensions of medical terminology in two distinct languages: French and Uzbek.

French and Uzbek, as languages spoken in diverse cultural and linguistic contexts, offer unique insights into the intersection of language and healthcare communication. Understanding the pragmatic nuances of medical terms in these languages is essential for facilitating clear and effective communication among healthcare professionals and patients. While extensive research has examined various aspects of medical terminology, there remains a gap in the literature regarding the pragmatic analysis of medical terms specifically in French and Uzbek.

This study aims to address this gap by conducting a comprehensive analysis of the pragmatic features embedded within medical terminology in both French and Uzbek languages. By examining how pragmatic factors such as context-dependency, implicature, and speech acts manifest within medical terms, we seek to enhance our understanding of cross-linguistic communication in healthcare settings. Through this analysis, we aim to shed light on the intricate relationship between language, pragmatics, and healthcare communication, with implications for medical education, intercultural communication, and clinical practice.

Methods and materials.

This study employs a qualitative analysis approach to examine the pragmatic aspects of medical terminology in French and Uzbek. A corpus of medical terms in both languages will be compiled from various sources, including medical textbooks, journals, and online databases. Each term will be analyzed for its pragmatic characteristics, including context-dependency, implicature, and speech acts. The analysis will be conducted by native speakers proficient in both French and Uzbek, ensuring accuracy and reliability.

The first step in our methodology involves compiling a corpus of medical terms in both French and Uzbek languages. This corpus will include terms commonly used in medical textbooks, journals, online databases, and other relevant sources. The

selection of terms will aim to cover a wide range of medical specialties and contexts to ensure comprehensive coverage.

We will develop a pragmatic analysis framework based on established principles of pragmatics, including context-dependency, implicature, and speech acts [2; 8]. This framework will guide our analysis of medical terms in French and Uzbek, allowing us to systematically examine the pragmatic dimensions of each term.

Our analysis will be qualitative in nature, focusing on identifying and describing the pragmatic features embedded within medical terms in French and Uzbek. Each term will be analyzed for its context-dependency, implicature, and potential speech acts encoded within it. This analysis will be conducted by native speakers proficient in both French and Uzbek, ensuring accuracy and cultural sensitivity.

Given the cultural and linguistic differences between French and Uzbek, we will pay particular attention to the contextual factors that may influence the interpretation and usage of medical terms in each language. This will involve considering cultural norms, linguistic conventions, and professional practices relevant to healthcare communication in French-speaking and Uzbek-speaking contexts.

To ensure the reliability and validity of our findings, we will employ multiple methods of data validation. This may include cross-referencing our analysis with existing literature on medical terminology in French and Uzbek, consulting with domain experts, and seeking feedback from native speakers of both languages.

Throughout the research process, we will adhere to ethical guidelines governing research involving human subjects. This includes obtaining appropriate permissions for the use of any copyrighted materials and ensuring the privacy and confidentiality of any individuals involved in the study.

Once the pragmatic analysis is complete, we will interpret the findings to identify common patterns and themes emerging from the data. This will involve synthesizing the results of our analysis to gain insights into the pragmatic characteristics of medical terminology in French and Uzbek languages.

Finally, we will report our findings in a comprehensive research paper, detailing the methodology, results, and implications of our study. We will also consider opportunities for dissemination through academic conferences, publications, and presentations to share our findings with the broader research community.

By following this methodology, we aim to conduct a rigorous and systematic analysis of the pragmatic dimensions of medical terminology in French and Uzbek languages, contributing to our understanding of cross-linguistic communication in healthcare settings.

Previous research has highlighted the importance of pragmatics in healthcare communication [1, 55-58; 3, 322]. Studies have shown that pragmatic factors such as context-dependency and implicature significantly impact the interpretation of medical terms [10; 12, 205-210]. However, there is a paucity of research specifically focusing on the pragmatic analysis of medical terminology in languages such as French and Uzbek.

The intersection of language and healthcare communication has garnered significant attention in linguistic and medical discourse. While the precise use of medical terminology is crucial for effective communication in healthcare settings, the pragmatic dimensions of these terms have emerged as an area of growing interest. This literature review examines existing research on medical term pragmatics, with a focus on studies related to the French and Uzbek languages.

Pragmatics, as the study of language use in context, offers valuable insights into how communication unfolds within specialized domains such as medicine. Previous research has highlighted the importance of considering pragmatic factors, including context-dependency, implicature, and speech acts, in understanding the interpretation and application of medical terminology [5]. While much of this research has been conducted in English or other widely studied languages, there is a need to explore pragmatic aspects of medical terms in less commonly studied languages such as French and Uzbek.

Research in medical terminology has primarily focused on lexical analysis, with studies examining the structure, origin, and standardization of medical terms [4, 13]. However, there is a paucity of literature specifically addressing the pragmatic dimensions of medical terminology in languages beyond English. This gap is particularly evident in the case of French and Uzbek, where cultural and linguistic nuances may influence the interpretation and usage of medical terms.

In recent years, there has been a growing interest in cross-linguistic pragmatics, which explores how pragmatic principles vary across different languages and cultures [6]. Studies in this area have highlighted the importance of considering language-specific pragmatic norms in healthcare communication to avoid misinterpretation and promote effective communication [7]. However, few studies have specifically investigated the pragmatic characteristics of medical terminology

in French and Uzbek.

To address this gap, our study seeks to conduct a comprehensive analysis of the pragmatic features embedded within medical terminology in French and Uzbek. By examining how pragmatic factors manifest within medical terms in these languages, we aim to contribute to a deeper understanding of cross-linguistic communication in healthcare settings. Through this analysis, we hope to identify language-specific pragmatic patterns that can inform medical education, intercultural communication, and clinical practice in multicultural healthcare environments.

In summary, while research on medical terminology has traditionally focused on lexical analysis, there is a growing recognition of the importance of considering pragmatic factors in understanding the interpretation and application of medical terms. This literature review highlights the need for further research on medical term pragmatics, particularly in languages such as French and Uzbek, and sets the stage for our study to contribute to this emerging area of inquiry.

Results.

Preliminary analysis of the French and Uzbek medical terminology corpus reveals several interesting findings. In both languages, medical terms often exhibit context-dependency, where the interpretation of a term depends on the surrounding context. Implicature is also prevalent, with certain terms conveying additional meaning beyond their literal definition. Furthermore, speech acts such as requests, commands, and suggestions are encoded within medical terms, reflecting the communicative functions they serve in healthcare contexts. The pragmatic analysis of medical terms in French and Uzbek languages revealed several noteworthy findings. Our examination focused on identifying context-dependency, implicature, and speech acts encoded within these terms, shedding light on the nuanced communication dynamics within healthcare contexts.

In both French and Uzbek medical terminology, we observed a high degree of context-dependency, wherein the interpretation of a term varied depending on the surrounding context. For example, the term "*pression artérielle*" in French (blood pressure) may require additional contextual information to specify whether it refers to systolic or diastolic pressure. Similarly, the Uzbek term "*qon bosimi*" (blood pressure) may necessitate clarification regarding the affected vertebrae or the severity of the fracture. These findings underscore the importance of considering contextual cues in accurately interpreting medical terms in both languages.

Our analysis also revealed instances of implicature, wherein medical terms

conveyed additional meaning beyond their literal definitions. For instance, the French term “*fièvre*” (fever) may imply underlying infection or inflammation, prompting further diagnostic considerations. Similarly, the Uzbek term “*isitma*” (fever) may connote feverish symptoms or elevated body temperature. These implicit meanings inherent in medical terms can significantly influence clinical decision-making and patient management, highlighting the importance of pragmatic interpretation.

Furthermore, our analysis identified various speech acts encoded within medical terms in both French and Uzbek languages. Certain terms functioned as directives, instructing healthcare professionals to perform specific actions or interventions. For example, the French term “intubation” (intubation) and the Uzbek term “*nafas yo'liga naycha ulash*” (tube into the respiratory tract) both entail actionable steps for medical practitioners. Additionally, terms such as “*diagnostic*” (diagnosis) and “*muolaja*” (treatment) served as speech acts signaling the initiation of diagnostic or therapeutic processes. These findings underscore the communicative functions embedded within medical terminology, facilitating effective communication among healthcare professionals.

Overall, the results of our pragmatic analysis provide valuable insights into the nuanced communication dynamics inherent in French and Uzbek medical terminology. The context-dependency, implicature, and speech acts identified within these terms underscore the importance of considering pragmatic factors in healthcare communication, particularly in multicultural and multilingual settings.

Discussion.

The findings of this study underscore the importance of considering pragmatic factors in the interpretation and usage of medical terminology. The analysis reveals that medical terms in French and Uzbek are not static entities but are instead influenced by context and communicative intent. Understanding the pragmatic characteristics of medical terminology in these languages is essential for effective communication among healthcare professionals and patients. The pragmatic analysis of medical terminology in French and Uzbek languages offers insights into the nuanced communication dynamics within healthcare contexts. By examining context-dependency, implicature, and speech acts encoded within medical terms, our study reveals the multifaceted nature of language use in medicine.

One notable finding is the cross-linguistic variability in pragmatic characteristics observed between French and Uzbek medical terms. For example,

consider the French term "prescription" (prescription) and its Uzbek counterpart "*dorinoma*" (name of the drug). While both terms convey the notion of a medical directive, the French term may carry additional implicatures related to legal regulations or physician authority. In contrast, the Uzbek term may emphasize the hierarchical relationship between the healthcare provider and the patient, reflecting cultural norms regarding medical decision-making.

Cultural and linguistic factors significantly influence the interpretation and usage of medical terms in French and Uzbek languages. For instance, the French term "*douleur*" (pain) may evoke different connotations depending on cultural attitudes towards pain management and expression. Similarly, the Uzbek term "*ixlos (ishonch)*" (trust) may carry implicit meanings related to the importance of trust and interpersonal relationships in healthcare interactions. These cultural and linguistic nuances shape the communicative functions of medical terminology and underscore the importance of cultural competence in healthcare communication.

Understanding the pragmatic nuances of medical terminology has important clinical implications. Consider the French term "*ordonnance*" (prescription) and its Uzbek equivalent "*dorinoma (retsept)*". In both languages, these terms serve as speech acts signaling the initiation of a treatment plan. However, the specific implicatures associated with these terms may vary, influencing patient expectations and adherence to treatment. Healthcare professionals must be aware of these pragmatic nuances to effectively communicate treatment plans and promote patient engagement in care.

Our findings highlight the need for incorporating pragmatic considerations into medical education and training programs. For example, healthcare professionals can benefit from training that emphasizes the importance of context in interpreting medical terms. Consider the French term "*rémission*" (remission) and its Uzbek counterpart "*qutulish (darddan)*". While both terms denote a temporary absence of symptoms, understanding the underlying context is essential for determining the appropriate course of action in patient care. By developing proficiency in pragmatic analysis, healthcare professionals can enhance their communication skills and improve patient outcomes.

While our study provides valuable insights into the pragmatic characteristics of medical terminology in French and Uzbek languages, further research is warranted to explore additional pragmatic dimensions and their implications for healthcare communication. For example, future studies could investigate the role of politeness strategies and discourse coherence in medical terminology interpretation.

Additionally, comparative studies involving other language pairs and cultural contexts can contribute to a deeper understanding of cross-linguistic pragmatics in healthcare communication.

Conclusion.

This study provides valuable insights into the pragmatic aspects of medical terminology in the French and Uzbek languages. By examining how pragmatic factors influence the interpretation and usage of medical terms, this research contributes to a deeper understanding of cross-linguistic communication in healthcare settings. Further research in this area is warranted to explore additional pragmatic dimensions and their implications for healthcare communication. The pragmatic analysis of medical terminology in French and Uzbek languages provides valuable insights into the intricate relationship between language, culture, and healthcare communication. By examining context-dependency, implicature, and speech acts embedded within medical terms, our study elucidates the multifaceted nature of language use in medicine.

Across both languages, we observed a high degree of cross-linguistic variability in the pragmatic characteristics of medical terms. For instance, consider the French term “*traitement*” (treatment) and its Uzbek equivalent “*davolash*”. While both terms denote a course of medical intervention, the specific implications and connotations may differ based on cultural attitudes towards healthcare and treatment modalities. Understanding these cultural and linguistic nuances is essential for effective communication and patient-centered care. Cultural and linguistic influences significantly shape the interpretation and usage of medical terms in French and Uzbek languages. For example, the French term “*guérison*” (healing) may evoke notions of holistic well-being and recovery, while the Uzbek term “*davo*” (cure) may emphasize the role of traditional healing practices and community support. These cultural nuances underscore the importance of cultural competence in healthcare communication and highlight the need for healthcare professionals to consider the diverse perspectives of patients from different cultural backgrounds. The pragmatic analysis of medical terminology has important clinical implications for healthcare practice. By recognizing the implicit meanings and communicative functions embedded within medical terms, healthcare professionals can enhance their communication effectiveness and promote patient engagement in care. For instance, understanding the pragmatic nuances of terms such as “*rémission*” (remission) and “*qutulish (darddan)*” (remission) allows clinicians to convey

treatment outcomes effectively and facilitate informed decision-making.
