# KASB-HUNAR TA'LIMI

Профессиональное образование  
Professional education

Ilmiy-uslubiy, amaliy, ma'rifiy jurnal  
2022-yil, 4-son

## Muassislar:

Oliy va o'rta maxsus ta'lim vazirligi,  
Pedagogik innovatsiyalar, professional ta'lim  
boshqaruv hamda pedagog kadrlarni qayta  
tayyorlash va ularning malakasini oshirish instituti

**Bosh muharrir:** M.XOLMUXAMEDOV

**Ijrochi direktor:** H.SIROJIDDINOV

## Tahrir hay'ati:

Z.Y.XUDAYBERDIYEV, R.X.JO'RAYEV,  
A.Q.JALALOV, A.R.XODJABAYEV  
J.SH.SHOSALIMOV, A.NABIYEV,  
A.A.HASANOV, H.SIROJIDDINOV,  
K.M.GULYAMOV

Jurnal 2000-yildan nashr etila boshlangan.  
O'zbekiston matbuot va axborot agentligida  
2007-yil 3-yanvarda qaytadan ro'yxatga olinib,  
0109-raqamli guvohnoma berilgan.

Jurnal O'zbekiston Respublikasi Vazirlar  
Mahkamasi huzuridagi Oliy Attestatsiya komissiyasi  
tomonidan 2017 yil 29 avgustdagi 241/8 qarori  
bilan Pedagogika fanlari bo'yicha dissertatsiyalar  
yuzasidan asosiy ilmiy natijalarni chop etishga  
tavsiya etilgan ilmiy nashrlar ro'yxatiga kiritilgan.

## EDUCATIONAL TECHNOLOGY TRENDS

**JO'RAYEV AKMAL RAZZOQOVICH**

**Buxoro davlat pedagogika instituti "Texnologik ta'lim" kafedrası professori,  
p.f.f.d (PhD)**

**AKOBIROVA MADINA BO'RONOVNA**

**Buxoro davlat universiteti "Elektronika va texnologiya" kafedrası o'qituvchisi**

**Annotatsiya:** zamonaviy texnologiyalar o'qituvchilarga an'anaviy matnga asoslangan ta'limdan tashqari ta'limni yaxshilashga yordam beradi va talabalarni amaliy ta'lim usullariga jalb qiladi. Ushbu maqolada siz o'quvchilarni yaxshilash uchun kelajakda ta'limda qanday texnologiyalar qo'llanilishini bilib olasiz. Kalit so'zlar: Ta'lim texnologiyalari tendentsiyalari, Ta'lim kommunikatsiyalari va texnologiyalari assotsiatsiyasi, texnologik jarayonlar va resurslar, texnologiya ta'limida integratsiya, ta'limda animatsiya, innovatsion usullar, multimedia, jonli video, onlayn kurslar, "zamonaviy" yordamchi.

**Аннотация:** современные технологии помогают учителям улучшить преподавание, выходящее за рамки традиционного текстового обучения, и вовлечь учащихся в практические способы обучения. В этой статье вы узнаете, какие технологии будут использоваться в образовании в будущем для улучшения учащихся.

**Ключевые слова:** Тренды образовательных технологий, Ассоциация образовательных коммуникаций и технологий, Технологические процессы и ресурсы, Интеграция в технологическое образование, Анимация в образовании, Инновационные методы, Мультимедиа, Живое видео, Он-лайн-курсы, «Современный» помощник.

**Abstract:** Technology today is helping teachers to enhance their teaching beyond traditional text-based learning and engage students with practical ways of learning. In this article, you will find what kind of technologies will be used for education in the future for the betterment of students.

**Key words:** Educational Technology Trends, Educational Communications and Technology Association, Technological Processes and Resources, Integration into Technological Education, Animation in Education, Innovative Methods, Multimedia, Live Video, Online Courses, "Modern" Assistant.

Introduction. President of the Republic of Uzbekistan Sh. Mirziyoyev said: "The solution of another problem is extremely important: this is the professional level of the composition of teachers and professors, their special knowledge. In this regard, it is necessary to create an environment that actively contributes to the processes of obtaining education, issues of spiritual enlightenment and formation of true values". The current scientific and technical development requires the introduction of innovative technologies not only in the sphere of production, but also in the sphere of cultural, socio-humanitarian knowledge, education. It is known that "in the national program of Personnel Training "it was noted that "providing the educational process with

advanced pedagogical Technologies" was defined as one of the serious tasks performed at the stages of improving and improving the quality of continuous education. In this sense, the rich spiritual potential and universal values of the people in the development of the Independent Republic of Uzbekistan, as well as modern culture, economy, science, technique and innovation creation and implementation of an excellent educational system based on the latest advances in technology, as well as theoretical and methodological foundations of national pedagogical and innovative pedagogical technologies the need to implement it is necessary to reform the national education system, bring its potential to the world level, create an educational market and train

competitive specialists.

Big Data, Machine Learning, and the Internet of Things (IOT) were the biggest educational technology trends of 2019. However, distance learning has become the one trend that rules them all. The COVID-19 pandemic has drastically changed the way we teach and learn. Students now have to get used to distance learning via digital platforms due to social distancing. Even though some schools are reopening, this trend may continue until 2021. The latest Educational Technology trends in 2020, and further into 2021 are being revolutionized with a strong focus on connectivity, versatility, and student-centered learning. Let's take a look at the latest top 10 trends in educational technology.

Literary analysis. Many people can recognize that Educational Technology is devoting technology to promote education. It's true, but not sufficient. The Association for Educational Communications and Technology (AECT) has defined Educational Technology as "facilitating learning and improving performance by creating, using, and managing appropriate technological processes and resources." On the other hand, educators who actually use Educational Technology have a much simpler definition of the term. They say that it is a concept of transforming traditional book teaching and learning to digital form. For them, the main difference lies in the way knowledge is delivered (thanks to technology innovation) to make teaching more effective.

In short, Educational Technology is simply. This is a process of integrating technology into education to build better teaching/learning experiences that result in higher learning outcomes. For example, several hospitals are training their new nurses with online safety courses by using animation. There are lots of reasons why educators shifted to Educational Technology, replacing

the traditional paper-and-pen teaching method. Particularly, we list some common advantages of Educational Technology that you can easily see. Technology is an innovation of humans, so when an educator can apply technology to teaching, it is also innovative. Educational Technology allows teachers to provide multimedia to address diverse learning styles, such as animation, live video, etc. Besides, Educational Technology enables teachers to create online courses where students can learn in their own space and at their own pace.

Technology has made it possible for everyone to stay connected. Students and teachers connect, discuss, share their opinions, and act upon situations collaboratively. For example, Learning is an educational tool that features collaboration by enabling students to share and discuss. Instead of being in a classroom and listening to teachers speak for 30 minutes, eLearning students can join an online group/platform and learn together by interacting with their peers. In this case, teachers are more accessible and act as mentors to help students develop themselves. This collaborative learning approach has bridged the gap between teachers and students and also helps students strengthen their interpersonal skills.

Main part. Firstly, Educational Technology benefits how teachers teach, both online and offline. Not always having to go to a specific class at a specific time, students can learn whenever and wherever. Secondly, Educational Technology changes the way students approach learning. Educational Technology makes learning more fun and exciting for students. When we feel engaged in learning, we learn better, remember better, and also apply knowledge better to real life. Lastly, technology makes education smarter, more effective, thus, satisfying learners' needs more. True educators bring valuable

knowledge to learners, both in theory and in real life. But smart educators are those who can create teaching from what learners want to learn. To sum up, Educational Technology doesn't mean teachers have to become IT experts. But it's true that teachers can do these fascinating things only with technology, and that's why we need Educational Technology in life.

If you are an innovative educator, following the trends in education is probably not something new but rather essential. Even with this list, however, it is still up to you to choose the most suitable "trendy" aid for your

teaching and training. Here we select the 10 latest educational technology trends that are must-know when diving into this industry.

### 1. Learning

Distance learning became the top 2020 educational technology trend overnight because of the rapid spread of COVID-19 and school closures. This led to a rising demand for online educational platforms. Learning is education or training delivered electronically. It can be slide-based online activities, or it can also be an online course that helps a business train employees in necessary skills.

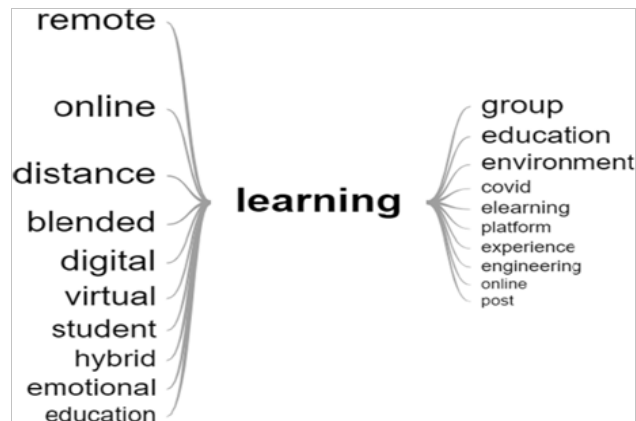

With learning, educational content is delivered to learners through computers, laptops, tablets, or smart phones. Not only saving time but opening many doors for interactive learning. Rather than being in a passive experience, learners can choose what they need to learn quickly and easily, wherever they are. They also learn through interacting directly with on-screen information through, for instance, dragging content from one place to the next. Moreover, the decision-making scenarios in eLearning also encourage learners to make their own choices on what they will learn next. In Learning, learners just soak in knowledge through reading or viewing content, it changes the way education is delivered. Also, many eLearning courses include animation, podcasts, and videos that create a multimodal and practical learning experience. The last point is, although Learning has been around for a long time, it is staying green and continuously developing. Educators are using the advantages of technology

to make learning more effective. That's why more and more online and blended learning courses are produced nowadays. Variety is the outstanding feature of online learning platforms. You can teach your students in real time (synchronous) via live stream or group meetings using Zoom or Microsoft Teams, or you can use recorded (asynchronous) methodologies with a wide range of media and digital functions available to enrich lessons. A good online learning platform can also be combined with a Learning Management System (LMS) so you can keep track of your students' learning outcomes.

### 2. Video-Assisted Learning

In recent years, video-assisted learning has become more and more popular as classroom displays. The "video day" is no longer a television on a trolley being wheeled into a class. With the internet and digital devices, every day can be a "video day." This trend is also booming in distance learning conditions, which students learn

through computer screens. Videos, especially animated videos, are extremely beneficial to enrich lessons and make content comprehensible. It improves students' outcomes and reduces teachers' workload.

### 3. Blockchain Technology

The Distributed Ledger Technology (DLT) from block chain brings so many benefits to education, especially data storage. Every time new data is added, it adds another "block" to the system, so the storage is technically limitless.

Simultaneously, the data will be encrypted and distributed across multiple computers in the system. It makes transacting data decentralized and transparent.

Block chain technology is used in Massive Open Online Courses (MOOC) and portfolios to verify skills and knowledge. The DLT systems will answer the problems of authentication, scale, and cost for learning agencies. Moreover, it can help student applicants publish their accomplishments during the job-seeking phase.

### 4. Big Data Will Get Bigger

To cater to learners' needs, the learning experience needs to be personalized. And with COVID-19 and online learning booming, we now have bigger data than ever before. Instructional Designers have relevant information about learners' experiences to customize and present the course in a suitable format. Some information you should look for is the course's topic, learner

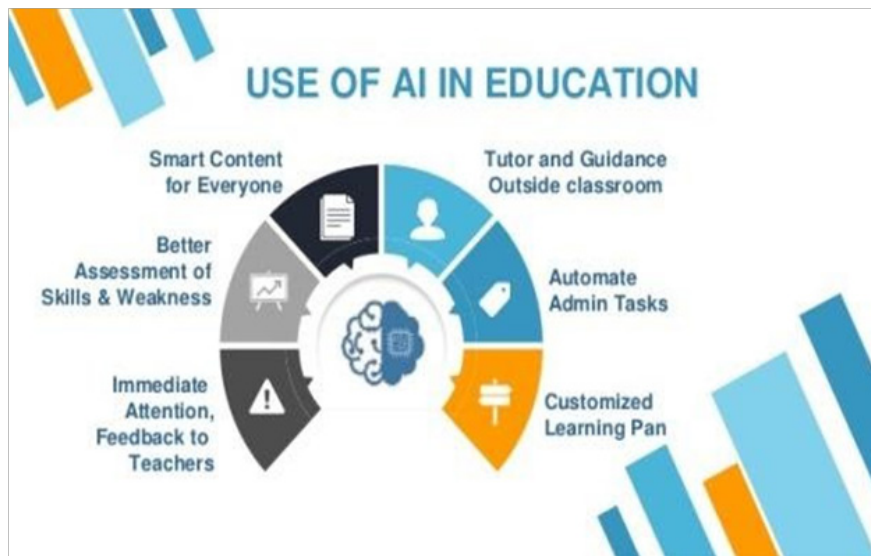

enrollment, learner performance (time per course, completion, test result), and learner feedback (rating, survey).

### 5. Artificial Intelligence (AI)

AI now is the "in thing" in the US Educational Technology market. People have predicted that through 2021, AI could become the primary trend and grow by more than 45%. So why is the trend booming in one of the world's largest markets

for Educational Technology? First and foremost, AI can automate basic activities in education, like grading. It's now possible for teachers to

automate grading of the multiple-choice and fill-in-the-blank questions. Thus, automated grading of students' writing may not be far behind.

Furthermore, both learners and educators could benefit from AI. For example, students could get help from AI tutors when teachers are too busy to take care of everyone. Also, AI-driven programs can give both learners and educators helpful feedback. That's why some schools use AI systems to monitor student progress and to alert teachers when there might be an issue with students' performances. Therefore, it's not too farfetched that AI is a powerful assistant for in-class teaching. Meanwhile, why don't you help your learners get more out of the educational experience via AI?

#### 6. Learning Analytics

The current landscape of learning analytics has dramatically expanded, especially for higher education. Learning analytics allows educators to measure and report student learning just by the web. From that, it's possible for them to better understand and optimize learning.

When teachers read insights from students' learning processes, they can improve the knowledge and skill acquisition of their students accordingly. For instance, teachers are able to see what type of information (text, images, info graphics, or videos) that students enjoy most and use it more in their following lessons. Also, teachers are able to notice what pieces of knowledge weren't effectively delivered and

enhance them next time. Moreover, learning analytics helps educators identify blocks of students who may have academic or behavioral challenges. From that, teachers could develop a way to help students reach their full potential. If you are looking for a way to turn learning into a more fun and engaging process, gamification is the most suitable educational technology trend. There is no reason for students not to be actively involved in classroom games. Students can learn and practice while they are joining in on exciting game activities. Gaming elements help create a funny and positive learning environment for learners. The adoption of gamification is most popular in the K-12 education sector. It's because kids are quickly engaged in gaming videos or getting higher scores in a game. However, it doesn't mean that higher education or corporate training doesn't need fun elements to improve the engagement level of learners.

#### 7. Immersive Learning with VR and AR

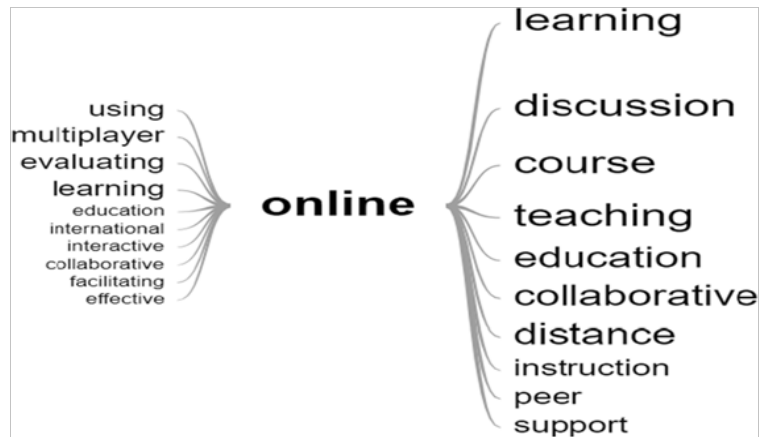

The class learning experience has undergone a tremendous change since Virtual Reality (VR) and Augmented Reality (AR) came to education. The rise in demand for experiential learning pushes forward the development of learning with VR and AR.

Learning has become much more interactive than traditional methods. While VR provides a

constructed reality, AR gives an enhanced view of a real image. Thus, they help explain complex concepts that plain images or even a lab's hands-on experiments couldn't show students. For

example, VR is pretty helpful when you are attending a medical training course. In detail, VR creates a chance for students to experience real-world surgeries in a low-risk environment.

## 8. STEAM

STEAM-based programs are the new Educational Technology improvement over the STEM programs. This new trend of Educational Technology applies meaningful Science, Technology, Engineering, Art (the new element), and Math content to solve real-world problems through hands-on learning activities and creative

design. Concerning the advantages of STEAM, the first thing is that it helps students become increasingly curious about the world around them. Moreover, it also creates a safe environment for the learners to express and experience their ideas while thinking outside the box. The comfort of hands-on learning also helps students collaborate better with others.

## 9. Social Media in Learning

Have you ever thought that social media would be a part of the learning process? When every student, both young and mature, spends so much time on social media, why don't we turn it into a powerful tool to enhance learning? It's how the idea to use social media for teaching came about. Many educational institutes have started

using social media as a communication tool in which students can interact with others easily. Students can share study materials, discuss with others in a group, or easily comment on someone else's post. Even an animated learning video could go viral on social media. And Educational Technology is the typical example of this trend! This organization creates lessons worth sharing
